

Rithish Janjeerapu

Hyderabad, Telangana, India

rithishjanjeerapu007@email.com — +91 7842121778 — LinkedIn — GitHub

Summary

Aspiring **Full Stack Developer** and web developer Skilled in building real-world applications using modern technologies and frameworks. Strong foundation in programming, data structures, and database management. Experienced in developing full-stack web apps using React, Node.js, and MongoDB. Passionate about solving problems with code, learning new tools quickly, and collaborating with teams to create impactful projects.

Education

Bachelor of Engineering (B.E.) in Computer Science 2024 – 2027
Chaitanya Bharathi Institute of Technology, Telangana
GPA: 8.61 — Key Coursework: Data Structures, Algorithms, Artificial Intelligence

Diploma in Computer Science 2021 – 2024
Govt. Institute of Electronics, Telangana
GPA: 9.5 / 10 — Coursework: C++, Java, DBMS, Python

Certifications

Google Cloud – Data Analytics Dec 2024
OCI AI Foundations Associate Oct 2025
Data Structure and Algorithms using Java-NPTEL Oct 2024

Achievements

- Solved over **400+ problems on LeetCode**, demonstrating strong analytical and problem-solving ability.
- Achieved a **4-star rating in Problem Solving** and **3-star rating in SQL** on HackerRank.
- Secured **2449 Rank in Amazon ML Challenge 2025**, competing in a large-scale machine learning competition.
- Received **Special Mention in Hacktober Fest Hackathon at CBIT**.

Skills

Programming Languages: Python, Java, SQL, JavaScript, HTML, CSS

Frameworks & Libraries: React, Node.js, Express, MongoDB, Bootstrap, LangChain, LangGraph

AI & LLM: Retrieval-Augmented Generation (RAG), LLM Integration (Groq, LLaMA), Prompt Engineering

Data Tools: Power BI, Tableau, Excel, Pandas, NumPy, FAISS (Vector Database)

Soft Skills: Teamwork, Communication, Leadership, Problem-Solving

Projects

AI-Powered Blog Website GitHub

- Built an AI-enabled blog platform using React, Node.js, Express, and MongoDB.
- Integrated OpenAI / Eden AI APIs to enable intelligent blog generation and writing assistance.
- Designed a responsive UI with dark mode to enhance user experience.

Food Product Authenticator Using OCR GitHub

- Developed a food license verification system using OCR for automated data extraction from license documents.
- Validated extracted information against a centralized database to detect invalid or counterfeit licenses.
- Built an admin dashboard for record management and verification monitoring.
- Improved transparency and reduced manual effort in food license generation and authentication.

Multiple Disease Prediction and Recommendation System GitHub

- Built machine learning models using Scikit-learn to predict Parkinson's disease, heart disease, and diabetes.
- Applied data preprocessing and feature analysis to improve model predictions.
- Implemented a personalized health recommendation system based on prediction severity.
